MOF

The MCC – inspired by W3C

What we do and what we don't

The MCC does NOT run an operational instance of the MCP

We do everything necessary for others to do so, including:

- Maintaining all standards relating to MCP -
including a reference implementation

- Facilitate root certification and ID broker

- Run a test instance of MCP – in order to validate reference implementation

- Accredit other organisations to run MCP instances

What we do and what we don't

The MCC does NOT run an operational instance of the MCP

We do everything necessary for others to do so, including:

- Maintaining all standards relating to MCP -
including a reference implementation

- Facilitate root certification and ID broker

- Run a test instance of MCP – in order to validate reference implementation

- Accredit other organisations to run MCP instances

But this requires resources! And they are coming from members!

So... Don't ask what the MCC
can do for you!

So... Don't ask what the MCC
can do for you!

Join the consortium and help
us make the MCP a reality!

and thereby e-navigation

Thank you for listening...
