Objet: Concept Note #16 on PortCDM

Hello,

You may have seen that we are posting various concept notes on PortCDM and STM, co-authored by quite a few experts from various areas of the maritime domain.

The latest Concept Note #16 "Reducing idle time with collaboration and data sharing" is now being released. If you are involved in maritime transport you know that idle times are occurring in most all of the voyages as they are approaching ports or during the port calls. Concept note 16 is analysing this situation and providing suggestions in how data sharing and in specific the implementation of the PortCDM concept can reduce or even eliminate idle times during port call.

I invite you to review this concept note. If you have remarks or questions, don't hesitate to contact me.

You can find the Concept Note 16 as well as the other 15 concept notes on at

<https://www.bergmann-marine.com/portcdm>

or on my LinkedIn site:
